**BUREAU OF STATISTICS**  
Planning & Development Board  
Government of the Punjab

# **PUNJAB AGRICULTURE STATISTICS - 2020**

**Bureau of Statistics**  
Planning & Development Board  
Government of the Punjab

## **Preface**

Bureau of Statistics, Punjab is an attached department of the Planning and Development Board, Government of the Punjab. Its mandate is to collect, compile, analyze and disseminate official statistics, relating to economic, social, demographic and other important aspects of society and its aim is to provide accurate, timely and quality data to facilitate data users for number of purposes, including quantitative analysis, informed decision making, planning, monitoring, evaluation and research. The Bureau has regular and periodic publications, covering statistics for almost all sectors in Punjab.

Punjab Agriculture Statistics is one of the most important publication, which contains information on almost all components of agriculture economy of the province. In order to improve the scope of this publication, information about Area and Production of three additional Rabi Crops (i.e. Maize, Onion and Masoor) have been included in this edition. The persistent hikes in the prices of these commodities said crops also gained in economic importance. Therefore the addition of these crops will be helpful for planner and policy maker. Also addition of Telephone Directory of Bureau of Statistics Punjab Headquarter Office, Lahore and Field Offices to contact for suggestions and query for improvements to make this report more valuable.

Punjab Agriculture Statistics will prove to be a valuable source for planning efforts of Government of the Punjab and agriculture development partners, and a reference for academia and research organization.

**(CH. SAJID RASUL)**  
**DIRECTOR GENERAL**

## **Editorial Board**

Ch. Sajid Rasul	Director General
Mr. Mohammad Mumtaz Ahmad	Director
Mr. Mubarak Ali	Deputy Director
Mr. Zahid Mahmood	Deputy Director
Ms. Rehana Bilqees	Statistical Officer

## **Data Composition**

Miss Shama Khaliq	Statistical Assistant
Mr. Ammad Ejaz	Statistical Assistant

## Symbols and Abbreviations

-	=	Nil or Insignificant
N.A.	=	Not Available
n.a.	=	Not Applicable
Divn.	=	Division
Distt.	=	District
N.R.	=	Not Reported
R.E.	=	Revised Estimates
B.E.	=	Budget Estimates
FATA	=	Federally Administered Tribal Areas
MSCFD	=	Million Standard Cubic Feet Per Day
(p)	=	Provisional
(r)	=	Revised
N	=	Nitrogenous Fertilizer
P <sub>2</sub> O <sub>5</sub>	=	Phosphatic Fertilizer
K	=	Potash
Rs.	=	Rupees
One Lac	=	100,000 = 100 Thousand
Ten Lacs	=	1,000,000 = 1 Million
One Crore	=	10,000,000 = 10 Million

---

*Note: - In some tables, totals may not tally with the sum of their component items due to independent rounding off of totals and their component items.*

## Metric Conversion Table

### LENGTH

1 Inch	=	2.539 Centimeters
1 Foot	=	0.305 Meter
1 Yard	=	0.914 Meter
1 Furlong	=	0.201 Kilometer
1 Mile	=	1.609 Kilometers
1 Nautical Mile	=	1.852 Kilometers
1 Centimeter	=	0.39 Inch
1 Meter	=	3.2808 Feet
1 Meter	=	1.09361 Yards
1 Kilometer	=	4.97095 Furlongs
1 Kilometer	=	0.62 Mile
1 Kilometer	=	0.54 Nautical Mile
1 Cubic Meter	=	35.314724 Cubic Feet
1 Square Kilometer	=	0.386102 Square Mile
1 Square Kilometer	=	247.1047 Acres

### AREA

1 Acre	=	0.405 Hectare
1 Hectare	=	2.471 Acres

### WEIGHT

1 Chattank	=	0.058 Kilogram
1 Seer	=	0.933 Kilogram
1 Lb.	=	0.454 Kilogram
1 Maund	=	37.324 Kilograms
1 Tonne	=	26.792 Maunds
1 Tonnes	=	0.984 Tons
1 Metric Ton (2205 Lbs.)	=	1000 Kilograms
1 Long Ton (2240.63 Lbs)	=	1016 Kilograms
1 Short Ton (2000 Lbs.)	=	907 Kilograms
1 Ounce	=	0.028 Kilogram
1 Kilogram	=	17.147 Chattanks
1 Kilogram	=	1.07 Seers
1 Kilogram	=	2.2046 Lbs.
1 Kilogram	=	0.027 Maund
1 Kilogram	=	0.00098 Long Ton
1 Kilogram	=	0.0011 Short Ton
1 Kilogram	=	35.273 Ounces
1 Bale	=	375 Lbs.
1 Bale	=	170 Kgs.

## EXPLANATORY NOTES ON AGRICULTURE STATISTICS

Agriculture section mainly comprises of Agriculture & Mereology, detailed description and definitions of the relevant terms are given along with each headings:

### A- Agriculture

Agriculture Statistics includes data on following topics:-

1. Land Utilization;
2. Agricultural Farms;
3. Agricultural Inputs (Temperature, Rainfall, Canal With-drawls, Sales, Nutrients Per Kg. and Prices of Fertilizers, Distribution of Improved Seeds and Area Treated with Pesticides )
4. Tube wells Installed, Electrified and Pumping in SCARPS' Areas; their Pumpage Capacity and Actual Pumpages;
5. Tractors by Ownership and Imports of Tractors;
6. Agricultural Institutional Credit;
7. Cropped Area and Area irrigated by Different Modes of Irrigation, Total Area Sown under various Crops (Total and Irrigated) and Area Failed:
8. Production and Per Hectare Yield of Important Crops. Area and Production of Various Oil Seeds, Fruit and Other Minor Crops: and
9. Water Table Depths

The collection and compilation of Land Utilization, Crop Acreage and Production data are explained below:-

#### a) Land Utilization

Land Utilization Statistics are compiled from the returns supplied by the tehsil offices based upon summarization of crop inspection data entered in Form-I of "Lal Kitab" of each Revenue Estate through Computer processing in this Bureau.

**Definitions of the terms used in the Land Utilization Statistics are given below:-**

- i) Total Area Reported means the total physical area of the village/deh, tehsil or district etc. It includes cultivated area (net area sown + current fallow), culturable waste, unculturable land and forest area.
- ii) Forest Area means the area of any land classed or administered as forest under any legal enactment dealing with forests. Any cultivated area which may exist within such forest should be excluded and shown under the heading cultivated area.
- iii) Total Cropped Area means the sum total of area sown during Rabi and Kharif seasons during a given year including Zaid Rabi and Zaid Kharif.
- iv) Not Available For Cultivation means the land absolutely barren, roads, canals, tanks, beds of rivers, torrents and ravines, sites of villages, houses, hills, mountains, sand dunes and all land devoted to uses alien to agriculture.
- v) Culturable Waste means all cultivable land not actually cultivated. It should include all grazing and other land not included under forest.
- vi) Cultivated Area means the land currently being used for agricultural purposes, including land under crops, orchards as well as current fallow. It is the area net sown plus current fallow.
- vii) Current Fallow means the part of the cultivated area which has not been used for cropping during the year under reference but for which the total vacant period does not exceed three crop seasons. The land remaining vacant for more than three successive seasons should be shown under the head 'cultivable waste'

- viii) Area Sown means the area which has been sown at least once in a year. It will include area under crops, fruit, vegetables etc.
- ix) Area Sown More than once means the difference between the total cropped Area and net sown i.e. the difference between (iii) and (viii).

#### **b) Area Under Crops**

Census of Crop Acreage is conducted by the Revenue Patwaries, twice a year, one for Rabi Season and other for Kharif Season in all about 26095 Mauzas of the Punjab Province including Islamabad. The Mauza-wise Crop Acreage Returns (Goshwara Jinswars) prepared manually by the Patwaries, are collected by the Bureau of Statistics, through Director Land Records from the Tehsildars. These returns are checked by the Bureau for completeness of coverage, edited, coded and entered in Computer. Credibility checks are applied at mauza level with the help of the Computer. These statistics are utilized by the Agriculture Department in the preparation of final production estimates. It may, however, be mentioned that 'Zaid Rabi' crops like Tobacco and Onion are not fully covered through this census as separate crop inspection is carried for these crops. The manually compiled acreage of these crops by the Revenue staff is, therefore, used for preparation of the final estimates of these crops.

#### **c) Production of Crops**

For Wheat, Cotton, Rice, Maize and Sugarcane, the Agriculture Department conducts Random Crop-Cutting Surveys. The observed data of these Surveys are edited in the light of available data on weather conditions, availability of water, use of fertilizers and other agricultural inputs. The Survey Estimates of yield-rates are then modified and utilized to prepare 'Official' production Estimates.

For other crops, the yield-rates are estimated on the basis of farmers opinion surveys and edited with the help of data on inputs, rainfall and weather conditions etc. The yield-rates thus arrived at are then applied to estimate the 'Official' estimates of total out-turn of the respective crops.

#### **d) Source of Irrigation**

According to the Assessment Rules, 1968; in The West Pakistan Land Revenue ACT, 1967, the following sources of irrigation are described as:

- i) Barani- dependent of rainfall
- ii) Sailab- flooded or permanently moist by rivers
- iii) Rod-kohi—watered from hill torrents
- iv) Abi- watered lift from tanks, jhils, streams, by flow from springs or karezes
- v) Nehri (Canals)- irrigated by canals by flow or lift
- vi) Chahi (Well)- watered from wells
- vii) Chahi-nehri (Canal-Wells) —irrigated partly from well and partly from a canal
- viii) Nul-chahi (Tube-well)—watered from tube-wells

#### **B- Meteorology**

The sub-section includes mean of minimum and maximum temperatures at selected stations from 2008 to 2019. The rainfall at the specified stations is recorded in millimeters instead of inches & cents ("1 = 25.4 Millimeters) at 0500, 0800 and 1700 Hours. PST daily by the Meteorological Observatories.

The Meteorological Observations recorded daily at different hours are copied by the Observers in Monthly Meteorological Register and this Register is sent to Regional Centre at 46-Gulberg Road, Lahore in the first week of each succeeding month. These Registers are then thoroughly scrutinized by the trained Meteorological Staff at Lahore and corrections are applied, where ever necessary.

The sums, averages and extreme (maximum & minimum) values of all the Meteorological Observations are also worked out by the scrutinizing staff. On the basis of these monthly values over a long period of 30 years the normal values are worked out.

### **C- Limitations**

The timely availability of statistics depends on two factors, first, the receipt of reports from the Field Staff and secondly, their tabulation at the Provincial level. As far as the acreage under various crops is concerned, the Bureau of Statistics has been trying to reduce the time-lag by collecting mauza-wise Goshwara Jinswars directly from the Revenue Field Staff through Director Land Records and by minimizing the tabulation time. The centralized collection and tabulation has reduced tabulation time appreciably.

Most of the agricultural statistics are by-products of the administrative activities of the Revenue Department. Since the collection of Statistics is not primary aim of the Revenue Department, the system has not provided for quality control on statistics derived from its records. The compilation of figures at all levels is done manually which undoubtedly contains errors of coverage, classifications, summations etc.

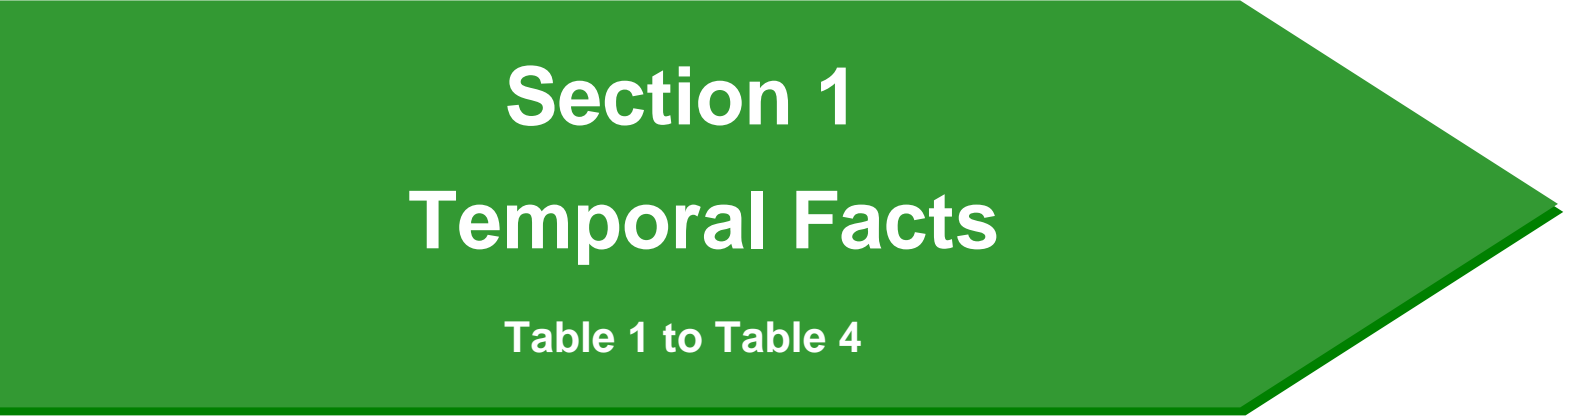

---

NOTE: Rabi and Rabi Crop Seasons run from April to September and October to March respectively.

Rainfall data from 2008 to 2019 reveals that maximum rainfall was recorded at Murree during last eleven years which is 2418 millimeters in 2015. Minimum rainfall was recorded in Khanpur in 2019 which is 225 millimeters. Graphical presentation is witness that Murree shows highest rainfall. There is weak inclination in the graph to have rainfall in Bahawalnagar, Bahawalpur, Faisalabad, Khanpur, Multan and Sargodha.

Rainfall data from 2008 to 2019 reveals that maximum rainfall was recorded 455.3 millimeters in Rawalpindi/ Islamabad.

## Cotton

Being a cash crop, cotton has a significant impact on the economy of farmer as well as agriculture sector. By taking 2009-10 as a base year it has been observed that there is 22.8% decrease in the index of area sown during the year 2019-20 and similarly a significant decrease in the production can be observed during the same which is 26.3%.

The area sown during the year 2019-20 decreased by 0.3% as compared to the year 2018-19 and the production decreased by almost 6.2%. In the year 2019-20 a decrease of 0.7% in the percentage of area sown compared last year 2018-19.

## Sugarcane

By taking 2009-10 as a base year it has been observed that there is 5.9% increase in the index of area sown during the year 2019-20 and increase in the production can be observed during the same which is 38.4%. The area sown during the year 2019-20 decreased by 11.1% as compared to the year 2018-19 and the production decreased by almost 5%. In the year 2019-20 a decrease of 1.1% in the percentage of area sown compared last year 2018-19.

It is noticeable that since 2010-11, a magnificent increase in the production of sugarcane can be noticed which is 70.5% and touched the highest point ever in the last ten years.

## Jowar

By taking 2009-10 as a base year it has been observed that there is 10% decrease in the index of area sown during the year 2019-20 and similarly a decrease in the production can be observed during the same which is 10.4%.

The trend in the area sown and production of Jowar crop in the Punjab remained almost same on the basis of 2009-10 as a base year up till 2014-15. It has been observed that on the basis of 2009-10, there is 25.3% increase in the index of area sown during the year 2015-16 and similarly a significant increase in the index of production can also be observed during the same which is 21.7%.

## Bajra

By taking 2009-10 as a base year it has been observed that there is 8.7% increase in the index of area sown during the year 2019-20 and similarly a increase in the production can be observed during the same which is 37%.

The trend in the area sown and production of Jowar crop in the Punjab showed there is increasing trend with little bit fluctuation till 2017-18 on the basis of 2009-10. Maximum increase in the indices of area sown can be observed as 12.7% during the year 2018-19 on the basis of year 2009-10, while maximum increase in the production can be observed as 40.2% during the year 2018-19. Percentage share of area sown under Bajra crop in the Punjab shows almost smooth pattern which fluctuates from 5.4 to 6.2.

## Rice

By taking 2009-10 as a base year it has been observed that there is 5% increase in the index of area sown during the year 2019-20 and similarly a increase in the production can be observed during the same which is 11.6%.

Rice being produced in Punjab has many varieties with special aroma and taste. The indices of area sown show that during the alst ten years there a decreasing with mild fluction in the trend on the basis of 2009-10. Maximum decrease of 11.4% in the area sown cab be observed during the year 2012-13 with maximum decrease of 6.3% in the production of rice during the same year. Percentage of area sown of Rice in the Punjab, fluctuating 23.2 to 27.4.

### Fodder Crop (Kharif)

By taking 2009-10 as a base year it has been observed that there 9% increase in the index of area sown during the year 2019-20 and similarly a increase in the production can be observed during the same which is 63.5%.

The contribution of livestock sector in GDP has a significant impact during the last decade due the encouraging and better policies devised by the government of the Punjab and concerned departments. The most noticeable statistics in the table is % share of area sown under fodder crop which fluctuate with minor change over the years that ranges from 11.9% to 13.5%. Same sustainable pattern is witness regarding indices of area sown and production but on the basis of base year 2009-10 and the indices of production show almost the stable trend.

## Wheat

By taking 2009-10 as a base year it has been observed that there is 5.8% decrease in the index of area sown during the year 2019-20 while production during same time period increased by 8.3%.

The continuous sequential cropping has been observed in the Punjab regarding wheat crop. During the Rabi crop season, data shows that the % share of area sown under wheat crop has a large share of area being cultivated for the wheat crop which fluctuates from 66.9% to 75.6% of the total cultivated area of the Punjab particularly for Rabi crops during the year 2009-10 to 2019-20.

### Gram

By taking 2009-10 as a base year it has been observed that there is 12% decrease in the index of area sown during the year 2019-20 and a decrease in the production can be observed during the same which is 11.9%.

Gram crop grown predominantly in rainfed areas of Punjab particularly Bhakkar, Khushab, Layyah. The production of Gram crop depends on rain fall and due to which a noticeable change in the indices of production can be observed while the indices of area sown remain almost same with smooth pattern and same can be observed in the last column of the table i.e % share of the area sown which remained between 8.7% to 10.6% .

In the above table the indices of area sown show that there is slight decreasing trend in the following year as compare with the base year 2009-10. The lowest decrease in the area sown can be observed as a decrease of 0.2% during the year 2010-11 on the basis of 2009-10.

## Barley

By taking 2009-10 as a base year it has been observed that there is 60.1% decrease in the index of area sown during the year 2019-20 and similarly a decrease in the production can be observed during the same which is 55.3%.

Barley is the important cereal crop after wheat, maize, and rice but the % share of area sown under Barley crop in the Punjab is very low, which fluctuates from 0.1% to 0.3%. Indices of area sown and production show the decreasing pattern with mild fluctuation.

### Masoor

By taking 2011-12 as a base year it has been observed that there is 69.7% decrease in the index of area sown during the year 2019-20 and similarly a decrease in the production can be observed during the same which is 72.5%.

The % share of area sown under Masoor crop in the Punjab is very low, which fluctuates from 0% to 0.1%. Indices of area sown and production show the decreasing pattern with mild fluctuation.

## Onion

By taking 2011-12 as a base year it has been observed that there is 2.2% decrease in the index of area sown during the year 2019-20 and 20.6% increase in the production can be observed during the same year.

The % share of area sown under Onion crop in the Punjab is very low, which fluctuates from 0.4% to 0.5%. Indices of area sown.

### Rape Seed & Mustard

By taking 2009-10 as a base year it has been observed that there is 188.9% increase in the index of area sown during the year 2019-20 and similarly an increase in the production can be observed during the same which is 414%.

The % share of area sown under the Rapeseed and Mustard crops in the Punjab is low which fluctuates from 1.2% (2009-10) to 3.3% (2019-20). It is noticeable that during 2019-20 area sown increased by 188.9%, production increased by 414% and percentage share of area sown also increased 2.1 to 3.3 which are highest indices during the last ten years by taking 2009-10 as base year.

### Fodder Crop (Rabi)

By taking 2009-10 as a base year it has been observed that there is 52.9% increase in the index of area sown during the year 2019-20 and similarly an increase in the production can be observed during the same which is 179.6%.

The contribution of livestock sector in GDP has a significant impact during the last decade due the encouraging and better policies devised by the government of the Punjab and concerned departments. The most noticeable statistics in the table is % share of area sown under fodder crop which fluctuate with minor change over the year that ranges from 9.6% (2014-15) to 15.6% (2019-20).

It is noticeable that during 2019-20 area sown under Fodder crops(Rabi) increased by 52.9% and production increased by 179.6% which are heighest indices during the last ten years by taking 2009-10 as base year.
