## Preface

Bureau of Statistics, Punjab is an attached department of the Planning and Development Board, Government of the Punjab. Its mandate is to collect, compile, analyze and disseminate official statistics, relating to economic, social, demographic and other important aspects of society and its aim is to provide accurate, timely and quality data to facilitate data users for number of purposes, including quantitative analysis, informed decision making, planning, monitoring, evaluation and research. The Bureau has regular and periodic publications, covering statistics for almost all sectors in Punjab.

Punjab Agriculture Statistics is one of the most important publication, which contains information on almost all components of agriculture economy of the province. The present edition is the 7th in the series of said publication.

Moreover, it is informed that Board of Revenue (BOR) is going to Digitalize Crop Acreage Statistics in all over the Punjab through Digital Girdawari System so that manual data collection of Crop Acreage Statistics has been stopped. Therefore, in this scenario BoS, Punjab is unable to publish the sections consisting of data related to Area Sown, Un-irrigated, Irrigated by mode of irrigation of the Crops for the season Rabi & Kharif (2022-23), on the basis of these facts total Area Sown in the Punjab was not be calculated by BoS punjab, therefore area of total Area Sown is repeated by the previous year in this publication.

Punjab Agriculture Statistics (PAS) will prove to be a valuable source for planning the efforts of Government of the Punjab & agriculture development partners, and a reference for academia and research organizations.

### LENGTH

1 Inch	=	2.539 Centimeters
1 Foot	=	0.305 Meter
1 Yard	=	0.914 Meter
1 Furlong	=	0.201 Kilometer
1 Mile	=	1.609 Kilometers
1 Nautical Mile	=	1.852 Kilometers
1 Centimeter	=	0.39 Inch
1 Meter	=	3.2808 Feet
1 Meter	=	1.09361 Yards
1 Kilometer	=	4.97095 Furlongs
1 Kilometer	=	0.62 Mile
1 Kilometer	=	0.54 Nautical Mile
1 Cubic Meter	=	35.314724 Cubic Feet
1 Square Kilometer	=	0.386102 Square Mile
1 Square Kilometer	=	247.1047 Acres

### AREA

1 Acre	=	0.405 Hectare
1 Hectare	=	2.471 Acres

### WEIGHT

1 Chattank	=	0.058 Kilogram
1 Seer	=	0.933 Kilogram
1 Lb.	=	0.454 Kilogram
1 Maund	=	37.324 Kilograms
1 Tonne	=	26.792 Maunds
1 Tonnes	=	0.984 Tons
1 Metric Ton (2205 Lbs.)	=	1000 Kilograms
1 Long Ton (2240.63 Lbs)	=	1016 Kilograms
1 Short Ton (2000 Lbs.)	=	907 Kilograms
1 Ounce	=	0.028 Kilogram
1 Kilogram	=	17.147 Chattanks
1 Kilogram	=	1.07 Seers
1 Kilogram	=	2.2046 Lbs.
1 Kilogram	=	0.027 Maund
1 Kilogram	=	0.00098 Long Ton
1 Kilogram	=	0.0011 Short Ton
1 Kilogram	=	35.273 Ounces
1 Bale	=	375 Lbs.
1 Bale	=	170 Kgs.

## EXPLANATORY NOTES ON AGRICULTURE STATISTICS

Agriculture section mainly comprises of Agriculture & Meteorology, detailed description and definitions of the relevant terms are given along with each headings:

### **A- Agriculture**

Agriculture Statistics includes data on following topics:-

1. Land Utilization
2. Agricultural Farms
3. Agricultural Inputs (Temperature, Rainfall, Canal With-drawls, Sales, Nutrients Per Kg. and Prices of Fertilizers, Distribution of Improved Seeds and Area Treated with Pesticides )
4. Tube wells Installed, Electrified and Pumping in SCARPS' Areas; their Pumpage Capacity and Actual Pumpages
5. Tractors by Ownership and Imports of Tractors
6. Agricultural Institutional Credit
7. Cropped Area and Area irrigated by Different Modes of Irrigation, Total Area Sown under various Crops (Total and Irrigated) and Area Failed
8. Production and Per Hectare Yield of Important Crops. Area and Production of Various Oil Seeds, Fruit and Other Minor Crops
9. Water Table Depths

The collection and compilation of Land Utilization, Crop Acreage and Production data are explained below:-

#### **a) Land Utilization**

Land Utilization Statistics are compiled from the returns supplied by the tehsil offices based upon summarization of crop inspection data entered in Form-I of "Lal Kitab" of each Revenue Estate through Computer processing in this Bureau.

**Definitions of the terms used in the Land Utilization Statistics are given below:-**

- i) Total Area Reported means the total physical area of the village/deh, tehsil or district etc. It includes cultivated area (net area sown + current fallow), culturable waste, unculturable land and forest area.
- ii) Forest Area means the area of any land classed or administered as forest under any legal enactment dealing with forests. Any cultivated area which may exist within such forest should be excluded and shown under the heading cultivated area.
- iii) Total Cropped Area means the sum total of area sown during Kharif and Rabi seasons during a given year including Zaid Kharif and Zaid Rabi.
- iv) Not Available For Cultivation means the land absolutely barren, roads, canals, tanks, beds of rivers, torrents and ravines, sites of villages, houses, hills, mountains, sand dunes and all land devoted to uses alien to agriculture.
- v) Culturable Waste means all cultivable land not actually cultivated. It should include all grazing and other land not included under forest.
- vi) Cultivated Area means the land currently being used for agricultural purposes, including land under crops, orchards as well as current fallow. It is the area net sown plus current fallow.

- vii) Current Fallow means the part of the cultivated area which has not been used for cropping during the year under reference but for which the total vacant period does not exceed three crop seasons. The land remaining vacant for more than three successive seasons should be shown under the head 'cultivable waste'
- viii) Area Sown means the area which has been sown at least once in a year. It will include area under crops, fruit, vegetables etc.
- ix) Area Sown More than once means the difference between the total cropped Area and net sown i.e. the difference between (iii) and (viii).

#### **b) Area under Crops**

Census of Crop Acreage is conducted by the Revenue Patwaries, twice a year, one for Kharif Season and other for Rabi Season in all about 26095 Mauzas of the Punjab Province including Islamabad. The Mauza-wise Crop Acreage Returns (Goshwara Jinswars) prepared manually by the Patwaries, are collected by the Bureau of Statistics, through Director Land Records from the Tehsildars. These returns are checked by the Bureau for completeness of coverage, edited, coded and entered in Computer. Credibility checks are applied at mauza level with the help of the Computer. These statistics are utilized by the Agriculture Department in the preparation of final production estimates. It may, however, be mentioned that 'Zaid Rabi' crops like Tobacco and Onion are not fully covered through this census as separate crop inspection is carried for these crops. The manually compiled acreage of these crops by the Revenue staff is, therefore, used for preparation of the final estimates of these crops.

#### **c) Production of Crops**

For Wheat, Cotton, Rice, Maize and Sugarcane, the Agriculture Department conducts Random Crop-Cutting Surveys. The observed data of these Surveys are edited in the light of available data on weather conditions, availability of water, use of fertilizers and other agricultural inputs. The Survey Estimates of yield-rates are then modified and utilized to prepare 'Official' production Estimates.

For other crops, the yield-rates are estimated on the basis of farmers opinion surveys and edited with the help of data on inputs, rainfall and weather conditions etc. The yield-rates thus arrived at are then applied to estimate the 'Official' estimates of total out-turn of the respective crops.

#### **d) Source of Irrigation**

According to the Assessment Rules, 1968; in The West Pakistan Land Revenue ACT, 1967, the following sources of irrigation are described as:

- i) Barani- dependent of rainfall
- ii) Sailab- flooded or permanently moist by rivers
- iii) Rod-kohi—watered from hill torrents
- iv) Abi- watered lift from tanks, jhils, streams, by flow from springs or karezes
- v) Nehri (Canals)- irrigated by canals by flow or lift
- vi) Chahi (Well)- watered from wells
- vii) Chahi-nehri (Canal-Wells) —irrigated partly from well and partly from a canal
- viii) Nul-chahi (Tube-well)—watered from tube-wells

#### **B- Meteorology**

The sub-section includes mean of minimum and maximum temperatures at selected stations from 2010 to 2020. The rainfall at the specified stations is recorded in millimeters instead of inches & cents ("1 = 25.4 Millimeters) at 0500, 0800 and 1700 Hours. PST daily by the Meteorological Observatories.

The Meteorological Observations recorded daily at different hours are copied by the Observers in Monthly Meteorological Register and this Register is sent to Regional Centre at 46- Gulberg Road, Lahore in the first week of each succeeding month. These Registers are then thoroughly scrutinized by the trained Meteorological Staff at Lahore and corrections are applied, where ever necessary.

The sums, averages and extreme (maximum & minimum) values of all the Meteorological Observations are also worked out by the scrutinizing staff. On the basis of these monthly values over a long period of 30 years the normal values are worked out.

### **C- Limitations**

The timely availability of statistics depends on two factors, first, the receipt of reports from the Field Staff and secondly, their tabulation at the Provincial level. As far as the acreage under various crops is concerned, the Bureau of Statistics has been trying to reduce the time-lag by collecting mauza-wise Goshwara Jinswars directly from the Revenue Field Staff through Director Land Records and by minimizing the tabulation time. The centralized collection and tabulation has reduced tabulation time appreciably.

Most of the agricultural statistics are by-products of the administrative activities of the Revenue Department. Since the collection of Statistics is not primary aim of the Revenue Department, the system has not provided for quality control on statistics derived from its records. The compilation of figures at all levels is done manually which undoubtedly contains errors of coverage, classifications, summations etc.

---

NOTE: Kharif and Rabi Crop Seasons run from April to September and October to March respectively.

**Table 1:- Land Utilization Statistics, The Punjab***(Thousand Hectares)*

Year	Reported Area	Cultivated Area			Un-Cultivated Area				Cropped Area Total	Area Sown More than once

### Cotton

Cotton production in Pakistan is integral to the economic development of the country. The nation is largely dependent on the cotton industry and its related textile sector, and crop has been given a principle status in the country. By taking 2012-13 as a base year, it has been observed that there is 35.7% decrease in the index of area sown during the year 2022-23 and similarly, a significant decrease in the production can be observed during the same year which is 66.3%. The area sown, during the year 2022-23, increase by 2.8% as compared to the year 2021-22.

### Sugarcane

Sugarcane is a high value cash crop of Pakistan and quite important for sugar related production. By taking 2012-13 as a base year it has been observed that there is 22.2% increase in the index of area sown during the year 2022-23 and increase in the production can be observed during the same which is 55.7%, an increase of 1.0% in the percentage share of area sown as compared to last year 2021-22.

### Jowar

By taking 2012-13 as a base year, it has been observed that there is 88.2% decrease in the index of area sown during the year 2022-23 and similarly, a decrease in the production can be observed during the same which is 85.5%. The above table also described that there is maximum Area Sown and Production of Jowar crop during the year 2015-16. i. It can be seen that index of area sown and production declined continuously after the period of 2015-16. A decreasing trend can be observed during last five (05) year and Now, during 2022-23 it is alarming that only 19.5 "000" Hect. of area sown and 24 "000" Tons of production on the account of jawar crop recorded in all over the Punjab.

**Bajra**

By taking 2012-13 as a base year with others, it has been observed that there is 62.8% decrease in the index of area sown during the year 2022-23 and similarly, a decrease in the production can be observed during the same which is 26.1%. According to the above table there is a fluctuation in figures during the period of 2020-21 and 2022-23 in index of area sown and production.

### Rice

Rice plays a keyrole in the agro-based and occupies a prominent position in agricultural economy of the country. Rice is important cash crop which makes economic prosperity of the growers/farmers as well as earns billion of rupees through its export for country.

By taking 2012-13 as a base year, it has been observed that there is 35.3% increase in the index of area sown during the year 2022-23 and similarly, an increase in the production can be observed during the same which is 45.8%.

**Fodder Crop (Kharif)**

The above table depicts that by taking 2012-13 as a base year, it has been observed that there is 131% increase in the index of area sown during the year 2022-23 and similarly, an significant increase in the production can be observed during the same which is 522%.

The contribution of livestock sector in GDP has a significant impact during the last decade due the encouraging and better policies devised by the government of the Punjab and concerned departments.

### Wheat

By taking 2012-13 as a base year, it has been observed that there is .5% decrease in the index of area sown during the year 2022-23 while production during same time period increase by 14.2%. The continuous sequential cropping has been observed in the Punjab regarding wheat crop. During the Rabi crop season, data shows that the percentage share of area sown under wheat crop has a large share of area being cultivated for the wheat crop which fluctuates from 60.0% to 75.6% of the total cultivated area of the Punjab particularly for Rabi crops during the year 2012-13 to 2022-23.

**Gram**

By taking 2012-13 as a base year, it has been observed that there is 18.1% decrease in the index of area sown during the year 2022-23 and a increase in the production can be observed during the same which is 75.1%.

Gram crop grown predominantly in rainfed areas of Punjab particularly Bhakkar, Khushab, Layyah. The production of Gram crop depends on rain fall and due to which a noticeable change in the indices of production can be observed while the indices of area sown remain almost same with smooth pattern and same can be observed in the last column of the table i.e % share of the area sown which remained between 7.6% to 10.2% .

### Barley

By taking 2012-13 as a base year, it has been observed that there is 94.8% decrease in the index of area sown during the year 2022-23 and similarly, a decrease in the production can be observed during the same which is 88.4%.

Barley is the important cereal crop after wheat, maize, and rice but the % share of area sown under Barley crop in the Punjab is very low, which fluctuates from 0.01% to 0.3%. Indices of area sown and production show the decreasing pattern with mild fluctuation since 2019-20 but on ward a significant decrease can be observed.

**Fodder Crop (Rabi)**

By taking 2012-13 as a base year it has been observed that there is 58% increase in the index of area sown during the year 2022-23 and similarly an increase in the production can be observed during the same which is 306%.

The contribution of livestock sector in GDP has a significant impact during the last decade due the encouraging and better policies devised by the government of the Punjab and concerned departments. The most noticeable statistics in the table is percentage share of area sown under fodder crop which fluctuate with minor change over the year that ranges from 9.6% (2014-15) to 15.6% (2020-21).
