Preface

Bureau of Statistics, Punjab is an attached department of the Planning and Development Board, Government of the Punjab. Its mandate is to collect, compile, analyze and disseminate official statistics, relating to economic, social, demographic and other important aspects of society and its aim is to provide accurate, timely and quality data to facilitate data users for number of purposes, including quantitative analysis, informed decision making, planning, monitoring, evaluation and research. The Bureau has regular and periodic publications, covering statistics for almost all sectors in Punjab.

Punjab Agriculture Statistics is one of the most important publication, which contains information on almost all components of agriculture economy of the province. The present edition is the 9th in the series of said publication.

Moreover, this publication provides a comprehensive and detailed record of agricultural data covering both major and minor crops at the provincial, divisional, and district levels. It includes information on the area sown and production over the past decade for both Rabi and Kharif seasons offering a clear perspective on historical trends, seasonal variations, and current agricultural performance. In addition, the book presents Land Use Statistics, detailing the cultivated, uncultivated, net sown, fallow, cultivable waste, forest, and multi-cropped areas. In addition to crop-specific data, the publication encompasses a wide range of agricultural inputs and infrastructural indicators. These include climatic factors such as temperature and rainfall, mechanization tools such as bulldozers and laser land levelers, and irrigation improvements including enhanced water courses as well as mini and small dams.

By integrating these diverse datasets, the publication provides in-depth insights into trends, patterns, and developments in crop cultivation, resource utilization, and agricultural infrastructure. This detailed information serves as a valuable reference for policymakers, researchers, planners, and all stakeholders seeking to promote sustainable growth, productivity, and modernization of Punjab's agriculture.

Punjab Agriculture Statistics will prove to be a valuable source for planning the efforts of Government of the Punjab & agriculture development partners, and a reference for academia and research organizations.

| N | = | Nitrogenous Fertilizer |
| P ₂ O ₅ | = | Phosphatic Fertilizer |
| K | = | Potash |
| Rs. | = | Rupees |
| One Lac | = | 100,000 = 100 Thousand |
| Ten Lacs | = | 1,000,000 = 1 Million |
| One Crore | = | 10,000,000 = 10 Million |

Note: - In some tables, totals may not tally with the sum of their component items due to independent rounding off of totals and their component items.

Metric Conversion Table

LENGTH

| | | |
|--------------------|---|----------------------|
| 1 Inch | = | 2.539 Centimeters |
| 1 Foot | = | 0.305 Meter |
| 1 Yard | = | 0.914 Meter |
| 1 Furlong | = | 0.201 Kilometer |
| 1 Mile | = | 1.609 Kilometers |
| 1 Nautical Mile | = | 1.852 Kilometers |
| 1 Centimeter | = | 0.39 Inch |
| 1 Meter | = | 3.2808 Feet |
| 1 Meter | = | 1.09361 Yards |
| 1 Kilometer | = | 4.97095 Furlongs |
| 1 Kilometer | = | 0.62 Mile |
| 1 Kilometer | = | 0.54 Nautical Mile |
| 1 Cubic Meter | = | 35.314724 Cubic Feet |
| 1 Square Kilometer | = | 0.386102 Square Mile |
| 1 Square Kilometer | = | 247.1047 Acres |

AREA

| | | |
|-----------|---|---------------|
| 1 Acre | = | 0.405 Hectare |
| 1 Hectare | = | 2.471 Acres |

WEIGHT

| | | |
|--------------------------|---|------------------|
| 1 Chattank | = | 0.058 Kilogram |
| 1 Seer | = | 0.933 Kilogram |
| 1 Lb. | = | 0.454 Kilogram |
| 1 Maund | = | 37.324 Kilograms |
| 1 Tonne | = | 26.792 Maunds |
| 1 Tonnes | = | 0.984 Tons |
| 1 Metric Ton (2205 Lbs.) | = | 1000 Kilograms |
| 1 Long Ton (2240.63 Lbs) | = | 1016 Kilograms |
| 1 Short Ton (2000 Lbs.) | = | 907 Kilograms |
| 1 Ounce | = | 0.028 Kilogram |
| 1 Kilogram | = | 17.147 Chattanks |
| 1 Kilogram | = | 1.07 Seers |
| 1 Kilogram | = | 2.2046 Lbs. |
| 1 Kilogram | = | 0.027 Maund |
| 1 Kilogram | = | 0.00098 Long Ton |
| 1 Kilogram | = | 0.0011 Short Ton |
| 1 Kilogram | = | 35.273 Ounces |
| 1 Bale | = | 375 Lbs. |
| 1 Bale | = | 170 Kgs. |

EXPLANATORY NOTES ON AGRICULTURE STATISTICS

Agriculture section mainly comprises of Agriculture & Meteorology, detailed description and definitions of the relevant terms are given along with each headings:

A- Agriculture

Agriculture Statistics includes data on following topics:-

1. Land Utilization
2. Agricultural Inputs (Temperature, Rainfall, Canal With-drawls, Sales, Nutrients Per Kg. and Prices of Fertilizers, Distribution of Improved Seeds and Area Treated with
3. Cropped Area and Total Area Sown under various Crops.
4. Production and Per Hectare Yield of Important Crops. Area and Production of Various Oil Seeds and Other Minor Crops
5. Water Table Depths

The collection and compilation of Land Utilization, Crop Acreage and Production data are explained below:-

a) Land Utilization

Land Utilization Statistics are compiled from the returns supplied by the tehsil offices based upon summarization of crop inspection data entered in Form-I of "Lal Kitab" of each Revenue Estate through Computer processing in this Bureau.

Definitions of the terms used in the Land Utilization Statistics are given below:-

- i) Total Area Reported means the total physical area of the village/deh, tehsil or district etc. It includes cultivated area (net area sown + current fallow), culturable waste, unculturable land and forest area.
- ii) Forest Area means the area of any land classed or administered as forest under any legal enactment dealing with forests. Any cultivated area which may exist within such forest should be excluded and shown under the heading cultivated area.
- iii) Total Cropped Area means the sum total of area sown during Kharif and Rabi seasons during a given year including Zaid Kharif and Zaid Rabi.
- iv) Not Available For Cultivation means the land absolutely barren, roads, canals, tanks, beds of rivers, torrents and ravines, sites of villages, houses, hills, mountains, sand dunes and all land devoted to uses alien to agriculture.
- v) Culturable Waste means all cultivable land not actually cultivated. It should include all grazing and other land not included under forest.
- vi) Cultivated Area means the land currently being used for agricultural purposes, including land under crops, orchards as well as current fallow. It is the area net sown plus current fallow.
- vii) Current Fallow means the part of the cultivated area which has not been used for cropping during the year under reference but for which the total vacant period does not exceed three crop seasons. The land remaining vacant for more than three successive seasons should be shown under the head 'cultivable waste'
- viii) Area Sown means the area which has been sown at least once in a year. It will include area under crops, fruit, vegetables etc.
- ix) Area Sown More than once means the difference between the total cropped Area and net sown i.e. the difference between (iii) and (viii).

b) Area under Crops

Census of Crop Acreage is conducted by the Revenue Patwaries, twice a year, one for Kharif Season and other for Rabi Season in all about 26095 Mauzas of the Punjab Province including Islamabad. The Mauza-wise Crop Acreage Returns (Goshwara Jinswars) prepared manually by the Patwaries, are collected by the Bureau of Statistics, through Director Land Records from the Tehsildars. These returns are checked by the Bureau for completeness of coverage, edited, coded and entered in Computer. Credibility checks are applied at mauza level with the help of the Computer. These statistics are utilized by the Agriculture Department in the preparation of final production estimates. It may, however, be mentioned that 'Zaid Rabi' crops like Tobacco and Onion are not fully covered through this census as separate crop inspection is carried for these crops. The manually compiled acreage of these crops by the Revenue staff is, therefore, used for preparation of the final estimates of these crops.

c) Production of Crops

For Wheat, Cotton, Rice, Maize and Sugarcane, the Agriculture Department conducts Random Crop-Cutting Surveys. The observed data of these Surveys are edited in the light of available data on weather conditions, availability of water, use of fertilizers and other agricultural inputs. The Survey Estimates of yield-rates are then modified and utilized to prepare 'Official' production Estimates.

For other crops, the yield-rates are estimated on the basis of farmers opinion surveys and edited with the help of data on inputs, rainfall and weather conditions etc. The yield-rates thus arrived at are then applied to estimate the 'Official' estimates of total out-turn of the respective crops.

d) Source of Irrigation

According to the Assessment Rules, 1968; in The West Pakistan Land Revenue ACT, 1967, the following sources of irrigation are described as:

- i) Barani- dependent of rainfall
- ii) Sailab- flooded or permanently moist by rivers
- iii) Rod-kohi—watered from hill torrents
- iv) Abi- watered lift from tanks, jhils, streams, by flow from springs or karezes
- v) Nehri (Canals)- irrigated by canals by flow or lift
- vi) Chahi (Well)- watered from wells
- vii) Chahi-nehri (Canal-Wells) —irrigated partly from well and partly from a canal
- viii) Nul-chahi (Tube-well)—watered from tube-wells

B- Meteorology

The sub-section includes mean of minimum and maximum temperatures at selected stations from 2014 to 2023. The rainfall at the specified stations is recorded in millimeters instead of inches & cents ("1 = 25.4 Millimeters) at 0500, 0800 and 1700 Hours. PST daily by the Meteorological Observatories.

The Meteorological Observations recorded daily at different hours are copied by the Observers in Monthly Meteorological Register and this Register is sent to Regional Centre at 46- Gulberg Road, Lahore in the first week of each succeeding month. These Registers are then thoroughly scrutinized by the trained Meteorological Staff at Lahore and corrections are applied, where ever necessary.

The sums, averages and extreme (maximum & minimum) values of all the Meteorological Observations are also worked out by the scrutinizing staff. On the basis of these monthly values over a long period of 30 years the normal values are worked out.

C- Limitations

The timely availability of statistics depends on two factors, first, the receipt of reports from the Field Staff and secondly, their tabulation at the Provincial level. As far as the acreage under various crops is concerned, the Bureau of Statistics has been trying to reduce the time-lag by collecting mauza-wise Goshwara Jinswars directly from the Revenue Field Staff through Director Land Records and by minimizing the tabulation time. The centralized collection and tabulation has reduced tabulation time appreciably.

Most of the agricultural statistics are by-products of the administrative activities of the Revenue Department. Since the collection of Statistics is not primary aim of the Revenue Department, the system has not provided for quality control on statistics derived from its records. The compilation of figures at all levels is done manually which undoubtedly contains errors of coverage, classifications, summations etc.

NOTE: Kharif and Rabi Crop Seasons run from April to September and October to March respectively.

Cotton

Cotton production in Pakistan is integral to the economic development of the country. The nation is largely dependent on the cotton industry and its related textile sector, and crop has been given a principle status in the country. By taking 2015-16 as a base year, it has been observed that there is 41.9% decrease in the index of area sown during the year 2024-2025 and similarly, a significant decrease in the production can be observed during the same year which is 39.5%. The % share of area sown, during the year 2024-25, decreased by 5.2% as compared to the year 2023-24.

Jowar

By taking 2015-16 as a base year, it has been observed that there is 97.5% decrease in the index of area sown during the year 2024-25 and similarly, a decrease in the production can be observed during the same which is 98.4%. The above table also described that there is maximum Area Sown and Production of Jowar crop during the year 2015-16 i.e 231.1 and 126.1 respectively. It can be seen that index of area sown and production declined continuously after the period of 2015-16. A decreasing trend can be observed during last seven (07) year and Now, during 2024-25 it is alarming that only 5.8 "000" Hect. of area sown and 3.6 "000" Tons of production on the account of jawar crop recorded in all over the Punjab.

^{*} Repeated**Barley**

By taking 2015-16 as a base year, it has been observed that there is 89.4% decrease in the index of area sown during the year 2024-25 and similarly, a decrease in the production can be observed during the same which is 85.4%. Barley is the important cereal crop after wheat, maize, and rice but the % share of area sown under Barley crop in the Punjab is very low, which fluctuates from 0.01% to 0.3%. Indices of area sown and production show the decreasing pattern with mild fluctuation since 2019-20 but onward from 2020-21, a significant decrease can be observed.
